

1. Fix Sidebar/Menu Icon Position for RTL/LTR Consistency

Task Title

Fix Menu Icon Positioning Across All Screens for RTL/LTR Support

Description

The sidebar/menu toggle icon position is inconsistent across different screens in the mobile app. The icon must follow the correct directional layout based on the app's language setting.

Requirements

Current Issue

- In **Screenshot 1** (Live Broadcast screen): The menu icon appears on the **top-left** (incorrect for Arabic/RTL)
- In **Screenshot 2** (Dashboard screen): The menu icon appears on the **top-right** ✓ (correct for Arabic/RTL)

Expected Behavior

Language	Layout Direction	Menu Icon Position
Arabic	RTL (Right-to-Left)	Top-Right corner
English	LTR (Left-to-Right)	Top-Left corner

Action Items

- Audit all screens** in the mobile app to identify where the menu/sidebar icon is incorrectly positioned
- Update the menu icon placement** to be dynamically based on the app's current language/direction:
 - When app language = **Arabic** → icon on the **right**
 - When app language = **English** → icon on the **left**
- Apply the fix across ALL interfaces/screens** — not just the Live Broadcast screen
- Ensure the fix uses proper RTL/LTR layout directives (e.g., `start / end` instead of `left / right` in layout code) so it automatically adapts when the language changes

Affected Screens

- Live Broadcast screen (البث المباشر) — **confirmed incorrect**
- All other screens must be reviewed and corrected if needed

Notes

- Use layout direction-aware properties (e.g., `marginStart / marginEnd`, `gravity="start"`) instead of hardcoded left/right values
- Test with both Arabic and English language settings to verify correct behavior on all screens

2. Fix Decorative Images/Patterns for LTR Layout

Task Title

Adjust Decorative Background Images for English (LTR) Layout

Description

When the application language is switched to English (LTR layout), the decorative background images/patterns in various frames and cards are not properly adjusted for the left-to-right layout direction.

Current Issue

The decorative Islamic geometric pattern images appear in the following locations and need LTR adjustment:

- **Header section** - Left and right corner decorative patterns
- **Subject cards** - Left and right side decorative patterns (visible in pink highlighted areas)

Requirements

Expected Behavior

When app language = **English (LTR)**:

1. Decorative pattern images should be **horizontally flipped/mirrored** to match LTR direction
2. OR positions should be **swapped** (left patterns move to right, right patterns move to left)
3. Visual balance and aesthetic should be maintained for LTR layout

Affected Components

- ✔ Dashboard header section (institute name area)
- ✔ Subject cards (all subject items in the list)
- ✔ All other cards/frames with similar decorative patterns

Technical Implementation

1. **Detect layout direction** (RTL/LTR) based on current language
2. **Apply transformation** to decorative images:
 - Option A: Use `scaleX: -1` transform for LTR to mirror images
 - Option B: Swap image sources based on direction
 - Option C: Use direction-aware image assets
3. **Test** in both Arabic (RTL) and English (LTR) modes
4. **Apply to all screens** that use these decorative patterns

3. Add Decorative Pattern Images to Sidebar/Drawer Menu

Task Title

Add Decorative Islamic Pattern Images to Sidebar Drawer Menu

Description

The sidebar/drawer menu is missing decorative Islamic geometric pattern images in specific locations. These patterns need to be added to match the design system used across the rest of the application.

Current Issue

As shown in the screenshot (pink highlighted boxes), the sidebar drawer menu is missing decorative pattern images in **two locations** around the user profile card section:

1. **Left side** of the user profile card (beige/tan card area)
2. **Right side** of the user profile card (beige/tan card area)

These decorative patterns are visible in other parts of the app (dashboard header, subject cards) but are **not rendered** in the sidebar menu.

Requirements

Expected Behavior

- Decorative Islamic geometric pattern images should appear on **both sides** of the user profile card in the sidebar drawer
- Patterns should match the style and opacity used in other screens
- Patterns should be **subtle/background-level** (not obstructing content)

RTL/LTR Considerations

Language	Layout	Pattern Position
Arabic	RTL	Patterns on both sides, mirrored appropriately
English	LTR	Patterns on both sides, mirrored appropriately

Implementation Details

1. **Add decorative pattern images** to the two highlighted areas in the sidebar:
 - Left edge of the user profile card container
 - Right edge of the user profile card container
2. **Use the same pattern assets** already used in the dashboard header and subject cards for design consistency
3. **Apply proper RTL/LTR handling**:
 - Use `start/end` positioning instead of hardcoded `left/right`
 - Mirror/flip patterns when switching between Arabic and English
4. **Ensure patterns are positioned correctly** relative to the profile card and do not overlap with text or interactive elements
5. **Set appropriate opacity** so patterns appear as subtle background decorations

4. Add "Coming Soon" Drawer/Modal for Unavailable Features

Task Title

Display "Coming Soon" Notification Drawer for All Unavailable Features

Description

Currently, when users tap on features that are not yet available in the application (e.g., the Exam/Quiz feature after completing a lesson), nothing happens or the behavior is unclear. A **"Coming Soon" drawer/modal** should be displayed to inform users that the feature will be available in the future.

Current Issue

- Features that are not yet implemented have **no user feedback** when tapped
- Users may be confused about why nothing happens
- No communication about future feature availability

Requirements

Expected Behavior

When a user taps on any **unavailable/not-yet-implemented feature**, a **bottom drawer or modal popup** should appear with:

1. **Illustration/Icon** — A friendly visual (e.g., rocket, clock, or construction icon)
2. **Title** — "قريباً" / "Coming Soon"
3. **Description** — A brief message explaining the feature will be available soon
4. **Close button** — To dismiss the drawer

5. Fix Subject Numbering Consistency Across All Pages

Task Title

Maintain Consistent Subject Numbering Between Subjects List and Subject Details Pages

Description

The subject numbering is inconsistent between the subjects list page (Home) and the subject details page. When a user navigates from the subjects list to a specific subject's

details page, the subject number resets to 1 instead of retaining its original number from the list.

Current Issue

Screenshot 1 — Subjects List (Home Page)

The subjects are numbered as follows:

Subject	Number
السيرة النبوية	1
النحو	2
التفسير	6
العقيدة	7
الحديث	8

Screenshot 2 — Subject Details Page (العقيدة)

When navigating to the **العقيدة** subject details page, the number displayed is **1 ✖** — but it should remain **7 ✔** as shown in the subjects list.

Expected Behavior

The subject number must be **consistent and persistent** across all pages:

Page	Subject	Expected Number
Subjects List	العقيدة	7
Subject Details	العقيدة	7 ✔
Any other page referencing the subject	العقيدة	7 ✔
