Task Title

Replace Content Type Constants: "مسموع" → "صوتي" and "مرئي" → "فيديو"

Description

The application currently uses the terms "صوتي" (Audio) and "فيديو" (Video) to label content types. These terms need to be replaced globally across all screens and interfaces with more appropriate terminology: "مسموع" and "مرئي" respectively.

Changes Required

Current Label	New Label	English Equivalent
صوتي	مسموع	Audio → Audible/Listening
فيديو	مرئي	Video → Visual

Affected Areas

This change must be applied **everywhere** these terms appear in the application, including but not limited to:

- ✔ **Subject/Material cards** — content type labels
- ✔ **Lesson detail screens** — media type indicators
- ✔ **Filters and search** — content type filter options
- ✔ **Sidebar/Menu items** — if any reference these types
- ✔ **Live broadcast screens** — session type labels
- ✔ **Saved/Bookmarks section** — content type tags
- ✔ **Settings** — any content type preferences
- ✔ **Notifications** — content type references
- ✔ **API response mappings** — if constants are used for backend mapping
- ✔ **All other screens** where these terms appear

Implementation Notes

For Developers

- Search the entire codebase** for the strings "صوتي" and "فيديو" (and their English equivalents "Audio" and "Video" if applicable)
- Update all constant definitions**, enum values, label texts, and string resources
- Check localization files** — update both Arabic and English string resources if these terms exist in translation files
- Check database/API mappings** — if these values are stored or returned from the backend, ensure consistency (may require backend coordination if values are hardcoded on the server side)
- Update any icons or visual indicators** associated with these labels if needed
