How it works

On every launch the app sends its **build number** (the `3000` in `1.0.1+3000`). The server answers with one of 4 statuses. Builds are compared by **build number only**; the version string is for display.

1. Mobile app (Flutter)

Endpoint (no login needed):

```
GET /api/public/app-version?platform=android&build=3000
```

`platform` and `build` can also be sent as the headers `Platform` and `Build-Number`. Read the build number with `package_info_plus` → `buildNumber`.

Response:

```
{
  "status": "force_update",
  "latest_version": "1.0.1",
  "latest_build": 3000,
  "minimum_version": "1.0.1",
  "minimum_build": 3000,
  "message": "يرجى تحديث التطبيق للاستمرار",
  "store_url": "https://drive.google.com/file/d/1B35AgUffUY-HJLYN4ugft_l-JLiU9B8g/view?usp=drive_link"
}
```

status	What the app shows
`ok`	Continue normally
`optional_update`	Dialog with **Update** + **Later** buttons
`force_update`	Full screen, **no close button**, only **Update** (opens `store_url`)
`maintenance`	Full maintenance screen with `message`; the app can't be used

- Call it **before** the splash/login, on every launch.
- `message` comes in the app language (send `Accept-Language: ar` or `en`).
- If the request fails (no internet), continue normally. Never block on a network error.

Build numbers:

- Next release: `version: 1.0.1+3000`.
- Every release after that increases it (3001, 3002…).
- Always build the same way: `flutter build apk --release`, with the same keystore.

2. Dashboard

One row per platform (`android`, `ios`). Requires `view_settings` to read and `manage_settings` to edit.

Action	Endpoint
List	`GET /api/admin/app-versions`
Show	`GET /api/admin/app-versions/{id}`
Create	`POST /api/admin/app-versions`
Edit	`PUT /api/admin/app-versions/{id}` (or `POST` to the same URL)
Delete	`DELETE /api/admin/app-versions/{id}`

Fields:

Field	Type	Notes
`platform`	`android` / `ios`	One row each
`latest_version`	string	Shown to users, e.g. `1.0.1`
`minimum_version`	string	Shown to users
`latest_build`	integer	Newest build
`minimum_build`	integer	Below this, the update is forced. Must be ≤ `latest_build`
`store_url`	URL	APK download link
`message[ar]`, `message[en]`	string	Optional
`maintenance_mode`	boolean	Optional

On edit, send only the changed fields.

Suggested screen: a card per platform showing the current values, an edit form, a **Maintenance mode** toggle, and a hint: *"Set minimum build = latest build to force everyone to update."*

Releasing a new build:

1. Upload the APK.
2. Set `latest_build` and `store_url`.
3. To force the update, also set `minimum_build` to the same number.
